

Smartmaster empowering businesses

The future is going to be electric – be a frontrunner with Smartmaster.

A potential ready to be unlocked

Smartmaster will unlock your client asset flexibility to leverage their full potential. It ensures an optimized balance between cost-effectiveness and sustainability, by combining control strategies:

- **Charging at cheaper time** using time-of-use electricity tariffs.
- Better energy planning using weather and load forecasts, **increasing self-consumption** up to +30%.
- Participation to **control reserve** using market signals.

Smartmaster is **brand-neutral and widely compatible** with many brands and models (compatibility list available [here](#)):

- Charging points.
- Solar panel and battery inverters.
- Heat pumps or other power measurements.
- External energy service platforms.

Straightforward installation, user-centric design

To ensure a **stress-free and long term** installation, our solution is supported by:

- A **topology wizard** guiding for a faster installation.
- Automatic remote software deployment and maintenance.
- Industrial-grade hardware.

Smartmaster focuses on client needs with complete peace of minds thanks to:

- Prioritizing end-user preferences and constraints.
- A comprehensive dashboard with **real time monitoring**.
- Alerts for immediate resolution.
- Automatic reports.
- A cloud solution with local fallback.

An exclusive ecosystem

Smartmaster **unique ecosystem** offers a lasting connection with your client.

Support your client journey thanks to:

- Hassle-free infrastructure change.
- Single-device solution with automatic remote update.
- Increase of assets without grid reinforcement.
