

# Smartmaster

## empowering households

The future is going to be electric – be a frontrunner with Smartmaster.

### A potential ready to be unlocked

Smartmaster will unlock your client asset flexibility to leverage their full potential. It ensures an optimized balance between cost-effectiveness and sustainability, by combining control strategies:

- **Charging at cheaper time** using time-of-use electricity tariffs.
- Better energy planning using weather and load forecasts, **increasing self-consumption**
- Participation to **control reserve** using market signals.

In Germany, Smartmaster promises substantial savings:

- 544€ from smart charging.
- 220€ from exposing flexibility.
- 185€ from avoided energy thanks to monitoring consumption.
- +45% of self-consumption with solar panels and a battery.
- Up to 450€ with a heat pump.

Smartmaster is **brand-neutral and widely compatible** with many brands and models (compatibility list available [here](#)).

## User-centric design

Designed with **user comfort** in mind, Smartmaster requires minimal user intervention while keeping user engagement.

- Ultra-low power hardware.
- **Real-time power consumption** monitoring and notifications.
- Tailored control modes and parameters.
- “Plug in your car and leave it” control.
- **Deep learning** on power time-series for tailored forecasts and tips.

## An exclusive ecosystem

Smartmaster **unique ecosystem** offers a lasting connection with your client and simplifies the user experience. **Support your client journey** thanks to:

- A single app for all assets.
- Automatic remote software updates and maintenance.
- custom analyses and risk assessment to prepare for asset extension.
