

Tip for : EVBOX ELVI

We recommend the following configuration tips when you try to configure the Smartmaster Pro with a EVBOX ELVI charger

- 1 Save the charge point's serial number. You will use it later in the process. It should look something like EVB-XXXXXXXXX.
- 2 Enter your charge point's security code, which should be supplied with your charge point's installation packaging.
- 3 The security code for your charging point is the same as the one used to enter installer mode.
- 4 Place the URL : `ws://{SMARTMASTER_IP_ADDR}:8834/ocpp` under Charging Manager Platform/Different Backend URL. Once complete, click on "Save" and then "Select".
